

VIGRI — LITEPAPER v0.1

November 2025

1. Project Overview

VIGRI is a Web3 ecosystem that connects sports and dance clubs with their supporters through its own token on Solana (**\$VIGRI**).

VIGRI's initial focus:

- professional and amateur sports clubs;
- ballet schools and dance studios;
- long-term offline projects, including the **International Training & Rehabilitation Center for Sports and Dance** on the coast of the Gulf of Finland (Estonia).

Fans use VIGRI to:

- support clubs directly,
- receive exclusive experiences and access,
- participate in special ecosystem activities.

Clubs receive:

- a new transparent funding channel,
- a closer relationship with their fans,
- involvement in the long-term Lumiroos ecosystem.

VIGRI NFT cards are the entry point into the ecosystem:

they record early participation, grant the right to receive VIGRI tokens on special terms, and become the foundation of the project's collectible and gamified layer.

2. Vision and Mission

Mission

To open new financial and emotional horizons for sport and dance by giving clubs and fans simple and transparent tools for mutual support based on decentralisation.

Vision

A community-driven ecosystem in which any club — from a local studio to a professional team — can grow sustainably, and every fan can become an active participant rather than a distant observer.

VIGRI builds a bridge between three worlds:

- clubs that need stable support;
 - fans who want to be closer and have an impact;
 - the crypto space, which often lacks real utility and cultural grounding.
-

3. The Problem

Today many clubs and studios face the same set of challenges:

- **Lack of sustainable funding**

Small and mid-sized clubs depend on unstable sponsors, fluctuating attendance, and the personal funds of founders.

- **Weak and fragmented fan engagement**

Fans have few tools to support clubs beyond occasional tickets and merchandise. Personal, targeted participation is almost absent.

- **Limitations of Web2 platforms**

Existing donation and crowdfunding platforms:

- are tied to specific countries and fiat currencies,
- often charge high and non-transparent fees,
- do not build long-term connection between clubs and fans,
- do not provide real ownership or transparency.

4. VIGRI Platform: the Solution

VIGRI Platform is a decentralised platform that supports European sports and dance clubs.

It uses the **VIGRI** token and NFT cards as key instruments:

- for fan engagement,
- for raising funds for infrastructure,
- for building a transparent ecosystem with a long-term horizon.

4.1. What Fans Get

On the VIGRI platform, fans will be able to use VIGRI tokens to access:

- club merchandise and apparel (including pre-orders via crowdfunding),
- spots on team trips to tournaments and events,
- private meetings and photo sessions with the team,
- participation in training sessions,
- digital collectibles and NFTs,
- exclusive content,
- special statuses (for example, "Fan of the Month" or "Tournament Sponsor"),
- other activities that clubs will create together with the community.

4.2. What Clubs Get

Clubs and studios receive:

- **direct on-chain revenue** — payment for services and packages in VIGRI without unnecessary intermediaries;
- the ability to **hold VIGRI as a digital asset**;
- tools to finance infrastructure projects (fields, halls, equipment);

- their own club page on the platform with history, roster, goals, and offers;
- new formats of interaction with fans (challenges, campaigns, shared goals);
- additional visibility within the Lumiros ecosystem.

4.3. Platform Level

At the platform level VIGRI provides:

- club pages with descriptions, goals, and live campaigns;
- categorisation by sport type, level, and country;
- smart contracts for pre-order and crowdfunding logic;
- integrations with design/freelance services when needed;
- social funds to support athletes in difficult situations.

VIGRI **does not promise** returns; the focus is on cultural, social, and emotional value around sport and dance.

5. VIGRI NFT Cards: a Fair Launch

The first phase of VIGRI is a **fair launch via NFT presale**.

VIGRI NFT cards on the Solana blockchain:

- record early participation in the Lumiros / VIGRI ecosystem;
- grant the right to receive VIGRI tokens on fixed terms;
- in some categories combine digital and physical collectible value;
- introduce gamified mechanics (DUO / TRIO / QUATTRO / WS-key codes, rarities, mystery format).

5.1. Basic Principle

- Each NFT card has a fixed **nominal value in euros** (for example, €50, €150, €1 000, etc.).
- At the moment of TGE a **strictly fixed starting token price** is set (see section 7.1).
Based on this price, the holder's right to **100% Claim** is calculated:
the full nominal value of the NFT is converted into VIGRI.
- Some categories additionally provide a **discount voucher**: the right to buy extra VIGRI on the platform at a discount to the market price after TGE. Vouchers work separately from Claim and do not change the base math.

The goals of this approach:

- launch the token via a clear and verifiable mechanism,
- avoid closed rounds with privileged conditions,
- tie early participation to utility-based rights rather than speculation.

5.2. Mystery Box and Reveal Model

- All NFTs are initially minted as "**mystery box**" with a single placeholder image.
- Real images, rarity (Common / Rare / Ultra) and some properties are revealed at an **official Reveal event**
(the first planned Reveal is **Q2 2026**).

- For the Bronze, Silver, Gold, Platinum, and WS-20 categories, Rare / Ultra rarity affects design, physical card, and status,
but not the Claim amount: the economic side is tied to the NFT price.

After the Reveal event the collection's metadata becomes **immutable**.

5.3. Categories (Short Overview)

Parameters may be refined in final documentation; below is the target model:

1. Tree / Steel — €50 (supply: 2 000)

- Choice of visual archetype: Tree or Steel, same conditions.
- 100% of the NFT's nominal value is converted into VIGRI at the TGE starting price.
- No physical card.
- Unique serial number.
- Base series, a clear and accessible entry point into the Lumirois collection.

2. Bronze — €150 (supply: 1 000, KYC required)

- 100% of the NFT's nominal value is converted into VIGRI at the TGE starting price.
- Additional voucher: the right to buy VIGRI with a discount (up to approx. 25%) for a limited period after TGE.
- Early access to Lumirois services.

3. Silver — €1 000 (supply: 200, KYC required, with vesting)

- 100% of the NFT's nominal value is converted into VIGRI at the TGE starting price.
- For part or all of the amount, **vesting** applies to smooth out market impact.
- Voucher to buy extra VIGRI with a discount (up to approx. 35%).
- Several design variants, physical card on request.
- DUO-code system: cooperative mechanics between participants.

4. Gold — €5 000 (supply: 100, KYC + vesting)

- 100% of the NFT's nominal value is converted into VIGRI at the TGE starting price with vesting.
- Voucher to buy extra VIGRI with a discount (up to approx. 40%).
- Unique design and numbering, physical card included.
- TRIO-code system: triple cooperative activations.
- Extended access to the Lumirois ecosystem.

5. Platinum — €10 000 (supply: 20, KYC + vesting)

- 100% of the NFT's nominal value is converted into VIGRI at the TGE starting price with vesting.
- Voucher to buy extra VIGRI with a discount (up to approx. 50%).
- Collectible physical card, QUATTRO codes.
- Access to private events and early Lumirois releases.

6. WS-20 — Airdrop (supply: 20, KYC, invite-only)

- Claim in VIGRI for a symbolic amount (equivalent of €500 at the starting price).
- Voucher to buy extra VIGRI with a discount (up to approx. 60%).

- Extended code system and WS-key.
- Access to special sections and Lumirois closed activities.

Exact numbers, discount percentages, vesting parameters and voucher validity periods will be published **before** the NFT presale starts.

6. Claim / Discount Mechanics

In the final VIGRI model a **simple and transparent logic** is used:

6.1. Claim — 100% for All Categories

- Every VIGRI NFT card grants a right to **100% Claim**:
the full nominal value of the NFT in euros is converted into VIGRI at the **fixed TGE price** (see 7.1).
- Claim is available **after the TGE event**.
- The total amount of tokens that can be issued via Claim for all categories together is capped at **15% of the total VIGRI supply**.

At the calculated starting price this amount **fully covers all maximum obligations** on sold NFTs.

For the **Silver, Gold, and Platinum** categories, Claim is implemented with **vesting**:

token distribution over time protects the market from sharp sell pressure and gives the project space to grow.

6.2. Discount — Only via Vouchers

- **Discount** is implemented **only via vouchers** built into certain NFT categories (Bronze, Silver, Gold, Platinum, WS-20).
- A voucher grants the right to:
 - buy additional VIGRI tokens on the platform at a price below the market,
 - within a limited period after TGE,
 - for an amount not exceeding the voucher's nominal value.
- Vouchers:
 - **do not affect** the base Claim math,
 - do not increase token obligations beyond pre-allocated pools,
 - are **marketing and community tools**, not investment promises.

Thus:

- **Claim** is a single, clear mechanic of 100% conversion of the NFT's nominal value into VIGRI at the starting price, with a strict 15% supply cap.
 - **Discount** is an extra benefit in the form of a discount right, granted via vouchers in specific categories.
-

7. VIGRI Tokenomics

7.1. Basic Parameters

- **Token name:** VIGRI
- **Ticker:** VIGRI
- **Total supply:** 10 000 000 000 VIGRI (fixed)

- **Blockchain:** Solana
- **Launch model:** launch via NFT presale
(no closed private rounds with privileged terms)

The starting token price at TGE is fixed as:

- **TGE price:** €0.0008 per 1 VIGRI
- **Fully diluted valuation (FDV) at TGE:** €8 000 000

This price is used:

- to calculate all Claim rights (conversion of NFT nominals into VIGRI),
- as a target reference when forming the first liquidity pool.

VIGRI is a **utility token** used for:

- paying for services and packages on the VIGRI platform,
- participating in cultural and social initiatives in the Lumirois ecosystem,
- accessing certain governance participation mechanisms in the future.

VIGRI is **not** a share or equity in any legal entity.

7.2. Token Distribution

Token distribution is built around three key tasks:

1. **Fulfil all obligations to NFT holders.**
2. **Provide real liquidity without “magic” funds.**
3. **Preserve enough resources for platform and ecosystem development.**

Distribution structure:

1. Public allocation: 30%

- Up to **15% — reserve for NFT Claim** (all categories, including WS-20). At the €0.0008 price this is enough to fully cover all possible Claim obligations.
- Up to **15% — additional community mechanisms:**
 - discount vouchers,
 - airdrop programs,
 - referral rewards,
 - marketing campaigns (including actions such as **VIGRI Mystery Draw**),
 - other transparent activities aimed at community growth.

2. Liquidity and exchange reserve: 30%

- This is a **general allocation** of tokens designated for:
 - the first liquidity pool at TGE,
 - subsequent pool expansion and liquidity support during the first years.
- At TGE, only **part** of this allocation is actively used in DEX pools (see 7.3). The rest is held as a **liquidity reserve**, which can gradually be added to pools and/or used for anti-dump measures.

3. Ecosystem development fund: 15%

- Development and maintenance of the VIGRI platform and related Lumiros services,
- infrastructure, security, integrations, R&D,
- launch of new functional modules and tools for clubs.

4. Founder's reserve: 10%

- Long-term motivation of the ecosystem's single founder with strict vesting (see section 8).

5. Strategic partners and ambassadors: 10%

- Tokens for cultural, sports and institutional partners,
- ambassadors and key contributors,
- used only with vesting and publicly announced terms.

6. Reserve for future initiatives: 5%

- A buffer for projects that cannot be described in detail today,
- but logically fit into the mission of VIGRI and Lumiros (e.g. new NFT formats, offline projects, international collaborations).

In total:

- **30%** — public distribution (including Claim and community mechanics),
 - **30%** — liquidity and exchange reserve,
 - **40%** — development, founder, partners, and future initiatives.
-

7.3. Use of NFT Presale Funds and Liquidity Formation

For clarity we split into two groups:

Group 1: Base Collections (Tree/Steel, Bronze, Silver)

- Total target raise: **€450 000**
- Distribution model:
 - **80% → liquidity bank:**
€360 000
 - **20% → operational costs / development:**
€90 000

Forming the First Liquidity Pool at TGE

At the TGE event:

- The first liquidity pool receives:
 - **4% of total VIGRI supply → 400 000 000 tokens,**
 - **€320 000** from the liquidity bank.

- This yields the starting price:

€320 000 / 400 000 000 VIGRI = €0.0008 per 1 VIGRI

The remaining **€40 000** from the liquidity bank form the initial **anti-dump/liquidity reserve**, which can be used:

- to support liquidity and price in case of aggressive selling at launch,
- or for other development tasks if liquidity is in a comfortable state — provided that decisions are announced transparently.

Group 2: Senior Categories (Gold, Platinum)

- Total target raise: **€700 000**
- Distribution model:
 - **20% → anti-dump / liquidity and development bank:**
€140 000
 - **80% → platform development and offline obligations:**
€560 000

Use of **€560 000**:

- development and launch of the VIGRI platform (including team expenses),
- design of digital and physical NFT cards,
- production and logistics of physical cards,
- marketing and community building,
- legal and tax expenses,
- reasonable compensation for the founder's operational work.

Anti-Dump and Additional Liquidity Reserve

By TGE, the total cash reserve that can be used to:

- support price,
- launch additional pools,
- or, in extreme cases, close platform gaps without losing face, —

amounts to: €40 000 (remaining liquidity bank from Group 1)

- €140 000 (part of Group 2)
= **€180 000**

This reserve is not required to be fully "frozen" solely for liquidity — the litepaper explicitly states that it may be used as:

- an **anti-dump fund**,
- an **additional liquidity source**,
- a **development safety fund**, if the main liquidity tasks are covered.

Important:

The token price at TGE **does not increase** due to additional NFT sales after the presale or due to Group 2.

All additional funds strengthen reserves and development, but the starting price for Claim and the first pool remains fixed at **€0.0008**.

8. Founder's Reserve and Long-Term Incentives

The VIGRI and Lumirois ecosystem has **a single founder** who financed the project at early stages without external investors.

To align the founder's interests with the community, the founder's reserve is structured as follows:

- **Reserve size:** 10% of total VIGRI supply
- **Ownership:** 100% held by the founder (a natural person)
- **Purpose:** a long-term strategic resource, not a short-term "personal profit" pool.

Vesting Model

- **Years 0–4 after TGE**
 - 100% of the reserve is locked; token movement is prohibited.
- **Year 4**
 - 50% of the reserve (5% of total supply) unlocks.
 - Use is limited to:
 - rewarding key investors and partners,
 - supporting non-monetary contributors and cultural leaders,
 - reinvesting into VIGRI / Lumirois projects.
- **Year 8**
 - The remaining 50% (another 5% of total supply) unlocks.
 - The founder gains full discretion
 - (including personal compensation and further reinvestment).

Transparency

- The founder's reserve is held in a publicly visible address (timelock / multisig wallet).
- The address and unlock schedule will be published before TGE.
- Any movement from this address is announced and explained in advance.

This structure establishes a horizon of **at least eight years** of shared responsibility to the community.

9. Flagship Offline Project:

International Training & Rehabilitation Center for Sports and Dance

VIGRI is more than just a token and a website. The long-term vision includes creating an **International Training & Rehabilitation Center for Sports and Dance** on the coast of the Gulf of Finland (Estonia).

Concept

- **Location:** Estonia, coast of the Gulf of Finland (first center).
- **Focus:** recovery, injury prevention, and psychological support for professional athletes and ballet/dance performers.
- **Target audience:** athletes, dancers, and other high-load professions.

Development Principles

- step-by-step progress: land → project → construction → launch;
- for each phase, a transparent framework:
 - clear goal and success criteria,
 - indicative cost ranges by major categories,
 - public on-chain addresses for monitoring,
 - reports and multisig oversight;
- no promised financial returns:
possible perks are only non-financial benefits
(access, priority booking, symbolic status, etc.),
described clearly and in advance.

The center is a **long-term goal**, not a pre-sold “product”.

Its implementation will depend on VIGRI’s success, community support, and regulatory conditions.

10. Roadmap (High-Level)

Timings are indicative and may be adjusted.

Phase 1 — Preparation and Core Infrastructure

- Development of the basic NFT collection structure:
 - defining categories, supply, and nominal values;
 - preparing on-chain metadata and placeholder images (mystery box).
- Development and audit of the NFT presale smart contract on Solana.
- Launch of vigri.ee (landing page, user account, basic KYC).
- Legal audit and compliance setup in Estonia.

Phase 2 — NFT Presale and Community Formation

- Public, phased NFT presale with a limited time frame for the first phase.
- Airdrop campaigns and promo activities (for example, “VIGRI Mystery Draw” with separate rules).
- Formation of the first cohort of partner clubs and studios.

Separate Stage — Reveal Event (Q2 2026)

- Hosting the first **Reveal Event**:
 - unveiling real NFT images and rarities,
 - updating the collection’s on-chain metadata,
 - communicating next steps and opportunities to holders.
- During this period, the visual aspects of the collection are finalised, while the core economic logic (Claim, nominals, rights) remains unchanged.

Phase 3 — VIGRI Token Launch (TGE)

- TGE event and launch of the first liquidity pool:
 - 4% of total supply + €320 000 at the starting price of €0.0008.
- Activation of the 100% Claim mechanic for NFT holders (with vesting for senior categories).
- Publication of addresses for liquidity reserves, Claim reserve, and other key wallets.
- Listing on selected decentralised exchanges (subject to compliance requirements).

Phase 4 — Platform Expansion

- Launch of the full VIGRI platform for clubs and fans.
- Onboarding clubs across Europe; initial use cases:
 - merchandise pre-orders,
 - fan experiences,
 - travel, training sessions, and meet-ups.
- Launch of the Ecosystem Development Fund and strategic partnership programs.

Phase 5 — Offline Projects and Long-Term Growth

- Step-by-step development and launch phases for the International Center (as ready, separate from token-related promises).
 - New Lumiros projects linked to VIGRI and the broader ecosystem vision.
 - Gradual decentralisation of governance participation and resource allocation.
-

11. Legal and Risk Disclaimer

- The VIGRI token and related NFT cards are **not**:
 - securities,
 - bank deposits,
 - shares or equity in any legal entity.
- They provide:
 - access to utility features (Claim, vouchers, activation codes, platform services),
 - digital and, in some cases, physical collectible value,
 - participation in cultural, sports, and social initiatives.
- Any purchase of NFTs or VIGRI tokens is made at the buyer's **own risk**.
The price of digital assets can fluctuate significantly.
- The project will apply **KYC/AML** procedures where required by law, service providers, or transaction volumes. For some NFT categories and for access to specific platform functions, KYC will be mandatory.
- This litepaper is for **information purposes only**.
It is not an investment recommendation, nor an offer to buy or sell financial instruments.

The team reserves the right to update NFT mechanics, tokenomics, and the roadmap as the project evolves and legal requirements change. All material changes will be published openly.
